

ABOUT YOUR ZAPPER

It has a lifetime warranty.

- The max output voltage is: 5 volts
- It takes 2-AA batteries
- It makes a loud pop & flash, but is not painful

Instructions:

1. Press the black button on the zapper. The red light will come on.
2. At the same time that the button is pressed, touch the terminals to the skin. You will hear a loud pop and see a flash.
3. For the device to pop and flash, you must press the button at the exact moment it touches the skin. This device is not a taser.
4. For a stronger sensation, you can press the button down while the terminals are already touching the skin and then drag the device across the skin. This method won't produce a loud pop and flash, but you will feel the current more intensely.
